

Eco Lifestyle Agent – Problem Statement

Problem Statement No. 6 – Eco Lifestyle Agent

The Challenge

An Eco Lifestyle Agent, powered by Retrieval-Augmented Generation (RAG), empowers users to adopt a greener lifestyle through personalized, practical suggestions. It retrieves sustainable living tips, eco-friendly product recommendations, local recycling guidelines, and government schemes from trusted environmental sources. Users can ask natural language questions such as “How can I reduce plastic use at home?” or “What are eco-friendly travel options in my city?” and receive instant, actionable guidance. The agent promotes small daily actions with big environmental impact, making sustainability easy and accessible. This AI-driven assistant fosters eco-conscious decisions, raises awareness, and helps build a more sustainable future.

Project Objective

Develop an AI-powered Eco Lifestyle Agent using Retrieval-Augmented Generation (RAG) to provide personalized sustainability guidance, promote eco-friendly habits, support recycling awareness, and encourage environmentally responsible decision-making.

Expected Features

- Sustainable living recommendations
- Eco-friendly product suggestions
- Recycling and waste management guidance
- Government sustainability scheme awareness
- Eco-friendly travel recommendations
- Personalized environmental tips
- Knowledge-base-driven responses using RAG
